Portfolio www.natilla-alves-portfolio.com.br · GitHub: github.com/nhatilla-integration · LinkedIn: linkedin.com/in/nátilla-alves-teixeira-a39a98248

PROFESSIONAL SUMMARY

Full Stack Developer in training and Systems Analyst with experience bridging business and technology, process analysis, requirements gathering and support for enterprise systems (ERP and CRM). Hands-on experience in solution integration, technical documentation, feature validation and operational workflow improvement, acting as a liaison between technical teams and business areas.

Knowledge of JavaScript, TypeScript, React, Node.js, Java, REST APIs, SQL and relational and non-relational databases, applied in the development of personal projects. Seeking an opportunity in systems development, contributing my analytical skills, systems thinking and ability to connect business needs with efficient technology solutions, with a focus on API integration and process automation.

PROFESSIONAL EXPERIENCE

Systems Integration Analyst (Intern) (Implementation & Delivery) — 08/2025 – 03/2026

AIoT Solution — Security, automation and IoT solutions integrator — *Campinas, Brazil*

- Translated business requirements into scalable technical architectures for smart infrastructure and automation projects
- Worked on systems integration (REST APIs, Wi-Fi, BLE) and studied the LoRaWAN protocol as a knowledge base for IoT projects
- Ran Proofs of Concept (PoC) and pilot projects, validating technical feasibility and operational alignment
- Acted as a bridge between sales, engineering and clients, structuring technical documentation (architecture diagrams, BOM)

Technical Consultant | Systems & Operations — 04/2023 – 11/2024

Motocicletas Triumph — *Campinas, Brazil*

- Managed systems and operational workflows using ERP (NBS) and cloud platforms
- Acted as a bridge between business operations and technical systems, ensuring process efficiency
- Provided technical support to customers via CRM, resolving issues and improving service workflows
- Supported audits and quality control, ensuring compliance and traceability

Warranty & Documentation Analyst | Processes & Systems — 07/2020 – 09/2022

Grupo Germânica — *Campinas, Brazil*

- Created and maintained dashboards and reports to track performance and operational KPIs
- Implemented digital workflows and standardized processes, improving data organization and efficiency
- Provided technical support to internal teams and customers, resolving system and operational issues

DEVELOPMENT PROJECTS

Vizi PDV (Vizi Vendas)
React · TypeScript · Tailwind CSS · Supabase · Vitest — github.com/nhatilla-integration/vizi-pdv
Point-of-sale (POS) system for small businesses (sales, inventory and cash register) as an installable PWA for tablets. Three access profiles (manager, employee and owner) with permissions enforced at the database level via Row Level Security, inventory calculated from stock movements, immutable audit trail and tests with Vitest. Live demo at pdv.vizicrm.com.br.

Credito.IA
Node.js · TypeScript · Express · Claude API — github.com/nhatilla-integration/credito-ia
AI agent that analyzes the credit structure of businesses: integrates the Central Bank of Brazil SGS API and the Omie ERP API, compares the rates paid against market benchmarks and generates, via the Claude API, recommendations for switching credit products with estimated savings.

Vizi CRM
React · Tailwind CSS · Supabase — github.com/nhatilla-integration/vizi-crm
Built from a real operational pain point: lack of visibility into the sales pipeline. Kanban lead pipeline, live metrics and database integration via Supabase Realtime.

NFS-e Issuance Simulator
Node.js · TypeScript · PostgreSQL · MongoDB · Docker — github.com/nhatilla-integration/nfse-simulador
Study project built to understand in practice the relationship between PostgreSQL and MongoDB, using Brazilian municipal service invoice (NFS-e) issuance as a case study. Layered architecture (controllers/services/models), validation with Zod, hybrid SQL/NoSQL modeling and automated tests with Jest.

Vizi Imóveis
React · Tailwind CSS · Supabase — github.com/nhatilla-integration/vizi-imoveis
Built for real use by my sister to manage her rental properties; for security, the demo login is fictitious and independent from her real credentials. Automatic contract status, repair history and real-time sync.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, SQL, Java
Frontend: React, Tailwind CSS, HTML5, CSS3
Backend: Node.js/Express, REST APIs
Data & Cloud: PostgreSQL, Supabase · AWS Fundamentals
Integration & Protocols: REST APIs, Wi-Fi, BLE · LoRaWAN (theoretical knowledge)
Currently deepening: Spring Boot, MongoDB, Docker, Jest
Tools: Git, GitHub, VS Code, Postman
Generative AI: Claude, Claude Code — applied in my daily development workflow (prototyping, code review and documentation)
Processes & Methodologies: Requirements Gathering, Process Modeling, Scrum, Kanban, LGPD (Brazilian data protection law), ERP, CRM

EDUCATION

Technologist Degree in Systems Analysis and Development — Final year

Universidade São Francisco (USF) — Campinas, Brazil

Technical Degree in Quality Management — Completed

Colégio Notre Dame — Campinas, Brazil

CERTIFICATIONS

- AWS Fundamentals (EC2, S3, Lambda, Cloud) — DIO, 2025
- Code Versioning with Git and GitHub — DIO, 2025
- LGPD – Fundamentals of the Brazilian General Data Protection Law — Fundação Bradesco
- Scrum and Kanban – Agile Methodologies — Senac

LANGUAGES

Portuguese: Native · English: Intermediate — technical reading, tools and documentation in English
